

MASS-APP-013B

Creative Workspace & Asset Stewardship

Executive Engineering Brief

Version 1.0

Purpose of this Volume

This volume engineers the operational workspace of the Design Studio. While Volume 013A established the philosophy of visual enterprise cognition, Volume 013B defines the environment in which enterprise creativity is performed. It governs creative workspaces, asset stewardship, templates, publishing preparation, and collaboration without duplicating enterprise data ownership.

Engineering Philosophy

Creative work should never begin from a blank slate. Every organization accumulates brand assets, photographs, videos, diagrams, templates, presentations, and institutional knowledge. Version 1 establishes these assets as governed enterprise resources that are searchable, reusable, versioned, and connected to the broader MASS ecosystem.

Construction Objectives

Version 1 shall establish the Creative Canvas, Asset Library, Brand Kit management, Template Library, Media Organization, Revision History, Approval preparation, Publishing preparation, AI-assisted creative drafting, and collaborative creative workflows. This volume intentionally excludes enterprise communications strategy and AI orchestration, which are addressed by later Design Studio volumes.

Relationship to the Design Studio Series

013B inherits the architectural philosophy defined in 013A. Subsequent volumes will consume the creative capabilities engineered here. This volume becomes the production environment used by Marketing, Communications, Training, Executive Intelligence, Customer Experience, and every department requiring professional visual content.

Claude Engineering Guidance

Engineer the workspace as a modular enterprise application. Prioritize reuse, governed assets, extensibility, and brand consistency. The workspace shall reference enterprise truth through existing services rather than maintaining duplicate business records. Creative assets, layouts, revisions, and publishing metadata are owned here; operational data remains owned by its constitutional subsystem.

Definition of Success

Upon completion of Version 1, organizations shall possess a governed creative workspace capable of producing consistent enterprise content from reusable assets while preserving brand integrity, institutional memory, collaboration, and constitutional ownership boundaries.

Engineering Blueprint Begins

The accompanying Engineering Blueprint defines the workspace architecture, asset lifecycle, creative services, collaboration model, publishing pipeline, permissions, integrations, and Version 1 implementation requirements.
