

MASS-APP-013C

Enterprise Communications & Content Creation

Executive Engineering Brief

Version 1.0

Purpose of this Volume

This volume establishes the enterprise capability responsible for transforming organizational knowledge into professional communication. It engineers the creation, review, publication, and lifecycle of enterprise communications while preserving enterprise truth and brand integrity.

Engineering Philosophy

Organizations communicate to teach, persuade, document, celebrate, recruit, train, and preserve institutional knowledge. Communications is therefore an enterprise capability built upon governed information rather than isolated creative documents.

Construction Objectives

Version 1 establishes proposal generation, presentations, marketing collateral, social media, newsletters, email campaigns, executive reporting, customer communications, training documents, SOP publishing, campaign lifecycle management, and multi-channel publishing. AI orchestration is deferred to Volume 013E.

Relationship to the Design Studio Series

013C inherits the philosophy of 013A and consumes the governed creative environment established by 013B. It provides the enterprise communication pipeline consumed by later Design Studio capabilities.

Claude Engineering Guidance

Engineer reusable communication workflows. Communications shall reference governed enterprise information, preserve modular templates, remain channel-independent, and never duplicate constitutional ownership of enterprise data.

Definition of Success

Organizations possess a unified communication platform capable of producing governed, traceable, professional communications across every business function while maintaining consistency and enterprise trust.

Engineering Blueprint Begins

The accompanying Engineering Blueprint defines communication architecture, content lifecycle, publishing workflows, template architecture, approval pipelines, collaboration model, integrations, and Version 1 implementation requirements.
