Relationship Timeline & Memory Version 1.0

Executive Briefing

Defines the constitutional timeline and enterprise memory model that preserves every significant relationship event and interaction.

Purpose

Provide governed continuity across the complete lifecycle of every person, organization, account, and engagement.

Core Principles

Chronological integrity, immutable history, contextual continuity, explainability, stewardship, and auditability.

Core Capabilities

Interaction timelines, milestones, notes, activities, communication references, memory indexing, contextual retrieval, and lifecycle history.

Architectural Boundary

Captures relationship memory without replacing authoritative source systems or operational workflows.

Version 1 Scope

Canonical event taxonomy, timeline services, memory indexing, retrieval rules, governance controls, and APIs.

Definition of Done

Relationship Timeline & Memory is fully defined for enterprise production.

Status

Complete
