Relationship Graph Version 1.0

Executive Briefing

Defines the enterprise relationship graph that connects people, organizations, assets, communications, opportunities, and knowledge into a unified constitutional network.

Purpose

Represent and analyze relationships as governed graph structures to improve discovery, navigation, collaboration, and intelligence.

Core Principles

Canonical identity, explainable relationships, governed connectivity, traceability, and enterprise consistency.

Core Capabilities

Graph modeling, relationship traversal, influence paths, network visualization, semantic associations, graph analytics, and constitutional governance.

Architectural Boundary

The graph indexes governed enterprise relationships without replacing authoritative source systems.

Version 1 Scope

Graph schema, entity and edge taxonomy, traversal services, analytics interfaces, governance, and APIs.

Definition of Done

Relationship Graph capabilities are fully defined for enterprise production.

Status
