Adaptive Cognitive Workspace Version 1.0

Executive Briefing

The Adaptive Cognitive Workspace extends the Executive Cockpit from enterprise awareness into an environment that continuously adapts to the user's work context, cognitive load, priorities, and collaboration needs.

Constitutional Principle

The workspace continuously adapts to the user's cognitive state rather than requiring the user to adapt to the software. Adaptation exists to improve clarity, focus, collaboration, and decision quality.

Workspace Philosophy

The interface behaves as a calm living environment. Changes are progressive, subtle, and reversible while preserving user trust.

Adaptive Signals

Adaptation considers time of day, Enterprise Weather, Enterprise Confidence, deadlines, workload, active projects, calendar pressure, collaboration intensity, executive priorities, relationship urgency, and operational disruptions.

Core Capabilities

Visual inference, information gravity, creator mode, flow preservation, collaboration awareness, deep work protection, and intelligent recovery summaries.

Platform Consumption Map

Consumes Identity, Security, AI, Analytics, Notifications, Relationships, Documents, Knowledge, Workflow, Communications, and Enterprise Awareness services.

Constitutional Boundary

The workspace organizes attention and presentation. It does not alter enterprise truth, execute business workflows, or assume ownership of operational data.

Version 1 Scope

Adaptive layouts, contextual surfaces, creator mode, deep work mode, collaboration awareness, cognitive summaries, intelligent recovery, and personalization.

Definition of Done

Users experience a cognitively adaptive executive workspace that improves focus and decision quality while preserving constitutional governance.
