

MASS-APP-002-V06

Autonomous Execution Governance Version 1.0

Executive Briefing

Defines governance for autonomous execution across MASS while ensuring every action remains constitutional, auditable, and human-directed.

Purpose

Provide the framework that allows trusted automation to execute approved work within defined operational boundaries.

Core Principles

Human oversight, constitutional compliance, explainability, traceability, least privilege, and reversible execution.

Capabilities

Execution policies, approval workflows, delegation levels, audit trails, exception handling, and recovery controls.

Constitutional Boundary

Autonomous execution operates only within authorized policy and never exceeds delegated authority.

Version 1 Scope

Policy engine integration, execution lifecycle, approval checkpoints, governance dashboards, and audit reporting.

Definition of Done

Automation executes safely, transparently, and consistently under constitutional governance.

Status
