

MASS-APP-002

Executive Cockpit

Amendment EC-004

Adaptive Cognitive Workspace

Constitutional Principle

The workspace shall continuously adapt to the user's cognitive state rather than requiring the user to adapt to the software. Enterprise software should understand work context and reshape the environment to maximize clarity, focus, collaboration, and decision quality. The purpose of adaptation is cognitive optimization.

The Workspace Shall Breathe

The interface is a living environment that adapts subtly and continuously. Changes should feel natural, calm, and nearly invisible while always improving clarity.

Workspace Breathing Variables

Adaptation considers time of day, Enterprise Weather, Enterprise Confidence, deadline proximity, workload, team availability, active projects, calendar pressure, cognitive load, collaboration intensity, executive priorities, relationship urgency, and operational disruptions.

Visual Inference

Instead of interrupting users, the workspace communicates through progressive visual cues that highlight urgency, dependencies, and opportunities without creating anxiety.

Information Gravity

Enterprise information naturally gathers around the user's current objective by surfacing related customers, documents, conversations, assets, financial context, AI observations, and historical work.

Creator Mode

Creator Mode is a cognitive environment for deep work. Notifications are minimized, project intelligence surrounds an infinite creative canvas, enterprise intelligence remains available, and a living project timeline preserves context.

Flow Preservation & Recovery

During productive work, MASS reduces interruptions. When momentum stalls, it offers concise summaries, identifies blockers, and recommends practical next steps.

Collaboration Awareness

The workspace quietly surfaces pending approvals, research gaps, expert availability, design reviews, and unresolved decisions to improve collaboration.

Deep Work Protection

Deep Work Mode protects concentration through simplified interfaces, reduced interruptions, preserved context, and intelligent recovery summaries.

Executive Principle

MASS organizes attention rather than information. Stewardship of human attention is a primary responsibility of the Executive Cockpit.
