

MASS-APP-003-V02

Work Orders & Mission Control Version 1.0

Executive Briefing

Defines the constitutional framework for planning, assigning, executing, and monitoring enterprise work through governed mission control.

Purpose

Provide a unified operational model for work orders, missions, assignments, execution tracking, and operational oversight.

Core Principles

Mission alignment, accountability, traceability, operational transparency, constitutional governance, and continuous execution awareness.

Core Capabilities

Work order lifecycle, mission planning, assignment management, execution tracking, prioritization, escalation, operational dashboards, and audit history.

Architectural Boundary

Coordinates enterprise operations without replacing specialized field service, ERP, or project execution systems.

Version 1 Scope

Canonical work order model, mission lifecycle, execution states, governance controls, reporting, and enterprise APIs.

Definition of Done

Work Orders & Mission Control are fully defined for enterprise production deployment.

Status

Complete
