

MASS-ENG-004

Security Framework Specification

Page 1 – Purpose & Scope

Purpose

Provide the enterprise-wide security framework that protects all MASS HQ components and data.

Objectives

- Enforce defense-in-depth
- Protect data in transit and at rest
- Standardize authorization enforcement
- Support auditing and compliance

Out of Scope

Business-specific security rules and application workflows.

Page 2 – Architecture

Core Components

Policy Engine, Access Control Layer, Encryption Services, Audit Service, Secret Management, Security Monitoring.

Relationships

The Security Framework integrates with Enterprise Core and Identity Engine while protecting every platform service.

Page 3 – Functional Specification

Requirements

1. Enforce authenticated access.
2. Apply authorization policies consistently.
3. Encrypt sensitive data.
4. Audit security events.
5. Secure secrets and credentials.

Non-Functional

Least privilege, immutable audit logs, secure defaults, extensibility, resilience.

Page 4 – Interfaces & Examples

Interfaces

Policy Evaluation, Encryption, Secret Retrieval, Audit Logging, Security Event Reporting.

Example Flow

Request → Authentication → Authorization → Policy Evaluation → Resource Access → Audit Record.

Page 5 – Construction Package

Claude Checklist

Implement policy engine; access control middleware; encryption services; secret management; audit logging; security monitoring; automated security tests.

Definition of Done

Every protected resource is governed by centralized security controls and produces auditable events.

Constitution References

Security, Governance, Identity, Platform Principles.
