

MASS-ENG-019

Growth Engineering Specification

Version 1.0

Engineering Objective

This specification implements the constitutional capability identified as Growth. Its purpose is to eliminate implementation ambiguity while preserving constitutional intent. Growth is the constitutional steward of enterprise expansion and shall optimize sustainable growth across the ecosystem without assuming ownership of relationships, communications, or customer experience.

Engineering Preface

Growth shall never be engineered as merely a Marketing department. Marketing is one expression of Growth, not its definition. Growth encompasses market expansion, partnerships, customer success, contractor success, platform adoption, community participation, ecosystem development, and enterprise intelligence. Momentum Marketing Solutions serves as the first operational validation environment for this capability but is not the constitutional owner. Growth shall optimize enterprise growth loops rather than isolated funnels and shall continuously strengthen the ecosystem through stewardship instead of command.

Purpose & Scope

Growth identifies, measures, improves, and compounds enterprise growth opportunities. It consumes relationship intelligence and customer experience intelligence to produce measurable enterprise expansion. Out of Scope: relationship ownership, communications delivery, operational execution, finance, and dispatch.

Architecture

Core Components: Growth Strategy Service, Opportunity Registry, Campaign Intelligence Service, Partnership Service, Market Intelligence Service, Adoption Analytics Service, Recommendation Service, Growth Metrics Registry, Ecosystem Intelligence Service.

Engineering Requirements

Functional: identify opportunities, evaluate growth loops, measure adoption, coordinate campaigns, analyze markets, recommend improvements, monitor ecosystem expansion. Non-Functional: measurable, observable, extensible, ethical, privacy-aware, constitutionally compliant.

Dependencies & Responsibilities

Requires Enterprise Core, Identity, Security. Uses Workflow, Knowledge, Documents, AI, Notifications, Observability, Persistence, API, Integration, Relationship Command, Customer Experience. Provides Growth Intelligence, Market Intelligence, Opportunity Intelligence, Partnership Intelligence. Owns enterprise growth strategy; does not own relationships, customer experience, communications, operations, finance, or dispatch.

Interfaces, Flow & Implementation

Interfaces: EvaluateGrowth(), IdentifyOpportunity(), MeasureAdoption(), AnalyzeMarket(), RecommendGrowth(), AssessPartnership(). Example Flow: Relationship Command establishes relationships → Customer Experience measures journeys → Growth identifies expansion opportunities → Communications executes campaigns → Operations fulfills demand → Analytics measures outcomes. Definition of Done: Growth continuously produces measurable enterprise expansion intelligence while preserving constitutional ownership boundaries.
