Finance Engineering Specification

Version 1.0

Engineering Objective

Finance implements the constitutional capability responsible for enterprise financial stewardship. It governs the recording, movement, reconciliation, forecasting, and reporting of financial value while preserving constitutional ownership boundaries.

Engineering Preface

Finance is the steward of enterprise value, not the owner of enterprise relationships. Relationship Command owns financial relationships; Operations executes work; Dispatch coordinates field execution; Finance records, reconciles, analyzes, and reports the financial outcomes of enterprise activity. Financial intelligence shall strengthen enterprise decision-making without altering constitutional responsibilities.

Purpose & Scope

Finance governs estimates, invoices, payments, receivables, payables, budgeting, forecasting, accounting integration, financial reporting, profitability analysis, and audit readiness. Out of Scope: relationship stewardship, customer experience, operational execution, marketing strategy, and communications delivery.

Architecture

Core Components: Finance Service, Ledger Service, Billing Service, Payment Service, Budget Service, Forecasting Service, Reporting Service, Audit Service, Compliance Service, Financial Intelligence Service.

Engineering Requirements

Functional: record transactions, generate invoices, reconcile payments, maintain budgets, produce forecasts, calculate profitability, support financial audits, publish financial intelligence.

Non-Functional: secure, auditable, accurate, resilient, observable, constitutionally compliant.

Dependencies & Responsibilities

Requires Enterprise Core, Identity, Security. Uses Workflow, Documents, AI, Notifications, Observability, Persistence, Error, Configuration, API, Integration, Relationship Command, Customer Experience, Growth, Operations, Dispatch. Provides Financial Intelligence, Billing, Accounting Integration, Budgeting, Forecasting, Profitability Analysis. Owns financial stewardship; does not own relationships, customer experience, communications, operations, or dispatch.

Interfaces, Example Flow & Definition of Done

Interfaces: CreateEstimate(), GenerateInvoice(), RecordPayment(), ReconcileAccount(), ProduceForecast(), PublishFinancialReport(). Example Flow: Operations completes work -> Dispatch confirms completion -> Finance generates invoice -> Payment recorded -> Financial Intelligence updated -> Executive reporting published. Definition of Done: Finance consistently governs enterprise financial value with complete auditability, reporting, and constitutional compliance.
