

MASS-ENG-025

Enterprise Planning Engineering Specification

Version 1.0

Engineering Objective

Enterprise Planning implements the constitutional capability responsible for strategic planning stewardship. It converts enterprise vision into executable objectives, initiatives, roadmaps, priorities, and resource plans while preserving constitutional ownership boundaries.

Engineering Preface

Enterprise Planning is the steward of enterprise direction—not enterprise execution. Vision establishes purpose, Growth identifies opportunity, Analytics provides evidence, and Enterprise Planning aligns objectives, initiatives, timelines, and resources into a coherent roadmap. Planning shall remain adaptive without compromising constitutional intent.

Purpose & Scope

Govern enterprise objectives, strategic initiatives, roadmaps, milestone management, capacity planning, portfolio prioritization, dependency planning, and planning intelligence. Out of Scope: operational execution, dispatch, financial processing, communications delivery, relationship stewardship, and customer experience.

Architecture

Core Components: Planning Service, Initiative Registry, Roadmap Service, Objective Service, Portfolio Service, Dependency Service, Capacity Planning Service, Milestone Service, Planning Intelligence Service, Strategy Repository.

Engineering Requirements

Functional: define objectives, manage initiatives, prioritize work, map dependencies, forecast capacity, monitor progress, recommend strategic adjustments. Non-Functional: observable, traceable, auditable, extensible, secure, constitutionally compliant.

Dependencies & Responsibilities

Consumes Platform Foundation, Enterprise Capability Layer, and Enterprise Analytics. Owns enterprise planning standards, strategic roadmaps, initiative governance, and planning intelligence. Does not own execution, finance, relationships, communications, or customer experience.

Interfaces & Example Flow

Interfaces: CreateObjective(), RegisterInitiative(), BuildRoadmap(), EvaluateCapacity(), AssessDependencies(), PublishPlan(). Example Flow: Enterprise Analytics identifies trends -> Growth proposes opportunities -> Executive leadership establishes objectives -> Enterprise Planning builds roadmap -> Operations executes -> Analytics measures results.

Claude Implementation Checklist

Implement objective hierarchy, roadmap management, initiative registry, dependency mapping, planning APIs, observability integration, constitutional traceability, and automated validation.

Definition of Done

Enterprise Planning consistently translates constitutional vision and enterprise intelligence into actionable, measurable, and governed plans that guide the entire MASS HQ ecosystem.
