

# **MASS-ENG-026**

## **Performance Intelligence Engineering**

### **Specification**

#### **Version 1.0**

## **Engineering Objective**

Performance Intelligence implements the constitutional capability responsible for enterprise performance stewardship. It continuously evaluates organizational performance, detects deviations from enterprise standards, and produces actionable performance intelligence without assuming ownership of operational execution.

## **Engineering Preface**

Performance Intelligence answers a simple question: 'How well is the enterprise performing?' It consumes enterprise analytics, planning objectives, operational outcomes, customer experience metrics, growth indicators, and financial intelligence to evaluate performance against constitutional expectations. It measures performance; it does not execute work.

## **Purpose & Scope**

Govern enterprise scorecards, KPI evaluation, performance baselines, benchmarking, trend monitoring, variance detection, performance recommendations, and enterprise health reporting. Out of Scope: operations, dispatch, finance execution, relationship stewardship, communications delivery, and strategic planning.

## **Architecture**

Core Components: Performance Service, Scorecard Registry, Benchmark Service, Variance Analysis Service, Trend Intelligence Service, Health Assessment Service, Recommendation Service, Performance Repository, Executive Scorecard Service, Continuous Improvement Registry.

## **Engineering Requirements**

Functional: evaluate KPIs, compare actual versus planned performance, detect variances, identify trends, recommend corrective actions, publish performance reports. Non-Functional: measurable, observable, auditable, scalable, resilient, constitutionally compliant.

## **Dependencies & Responsibilities**

Consumes Platform Foundation, Enterprise Capability Layer, Enterprise Analytics, and Enterprise Planning. Owns enterprise performance evaluation and scorecard governance. Does not own execution, planning, finance, communications, or customer relationships.

## **Interfaces & Example Flow**

Interfaces: EvaluatePerformance(), CompareObjectives(), DetectVariance(), PublishScorecard(), RecommendImprovement(), GenerateHealthReport(). Example Flow: Analytics publishes KPIs -> Planning provides objectives -> Performance Intelligence evaluates results -> Executive Intelligence consumes recommendations -> Leadership prioritizes improvements.

## **Claude Implementation Checklist**

Implement scorecard framework, benchmark engine, variance analysis, health reporting, recommendation services, observability integration, constitutional traceability, and automated validation.

## **Definition of Done**

Performance Intelligence consistently measures enterprise performance against constitutional objectives and produces trustworthy intelligence that enables continuous improvement across the MASS HQ ecosystem.
