Executive Intelligence Engineering Specification

Version 1.0

Engineering Objective

Executive Intelligence implements the constitutional capability responsible for executive decision intelligence stewardship. It transforms trusted enterprise intelligence into prioritized, contextual, and actionable executive awareness while preserving constitutional ownership boundaries.

Engineering Preface

Executive Intelligence is not a dashboard. Dashboards display information; Executive Intelligence presents decision-ready enterprise awareness. It consumes trusted intelligence from every constitutional capability and organizes it according to enterprise priorities, strategic objectives, risk, opportunity, and constitutional governance. It advises leadership; it does not replace leadership.

Purpose & Scope

Govern executive briefings, strategic awareness, enterprise summaries, decision support, enterprise risk visibility, opportunity visibility, executive alerts, constitutional compliance reporting, and leadership intelligence. Out of Scope: operational execution, planning ownership, financial processing, relationship stewardship, communications delivery, and AI orchestration.

Architecture

Core Components: Executive Intelligence Service, Executive Briefing Service, Strategic Priority Registry, Decision Support Service, Risk Intelligence Service, Opportunity Intelligence Service, Executive Alert Service, Leadership Workspace Service, Governance Reporting Service, Executive Intelligence Repository.

Engineering Requirements

Functional: aggregate enterprise intelligence, prioritize executive attention, produce executive briefings, evaluate enterprise health, surface strategic risks and opportunities, recommend decision pathways, maintain executive history. Non-Functional: trusted, explainable, auditable, secure, observable, constitutionally compliant.

Dependencies & Responsibilities

Consumes Platform Foundation, Enterprise Capability Layer, Enterprise Analytics, Enterprise Planning, and Performance Intelligence. Owns executive awareness and decision-support stewardship. Does not own enterprise execution, planning, finance, customer relationships, communications, or operational authority.

Interfaces & Example Flow

Interfaces: `GenerateExecutiveBrief()`, `PrioritizeAlerts()`, `AssessEnterpriseHealth()`, `PublishExecutiveSummary()`, `RecommendDecision()`, `RecordExecutiveOutcome()`. Example Flow: Enterprise capabilities publish intelligence -> Analytics validates metrics -> Planning provides objectives -> Performance Intelligence evaluates outcomes -> Executive Intelligence prepares decision briefings for leadership.

Claude Implementation Checklist

Implement executive briefing engine, strategic prioritization, decision support services, governance reporting, observability integration, constitutional traceability, explainability, and automated validation.

Definition of Done

Executive Intelligence consistently delivers trusted, prioritized, constitutionally governed decision intelligence that enables enterprise leadership to make informed, timely, and accountable decisions across the MASS HQ ecosystem.
