Executive Briefing

Design Studio is the reference application for MASS. It provides governed creation, review, publication, and lifecycle management for enterprise design assets. This manual defines implementation guidance for workspace architecture, component lifecycle, APIs, integrations, governance, and extensibility.

Purpose

Provide a constitutional engineering environment for creating and governing design artifacts.

Vision

Enable repeatable, implementation-ready product design across MASS.

Business Objectives

- Standardize engineering documentation
- Reuse design assets
- Govern change and publication
- Support collaboration

Architectural Principles

- API-first
- Immutable revisions
- Versioned assets
- Separation of concerns
- Constitutional governance

Functional Architecture

Services: Workspace, Project, Component, Asset, Review, Publish, Version, Search.

User Experience

Role-aware workspaces, guided workflows, accessibility, collaboration.

Core Components

Projects, Pages, Components, Tokens, Assets, Templates, Publications.

Workflows

Create → Edit → Review → Approve → Publish → Archive.

Conceptual Data Model

Project -> Page -> Component -> Asset.

Publication references immutable revisions.

Integration Points

Identity, Documents, Notifications, Knowledge, Executive Cockpit.

Security & Governance

RBAC, audit logs, approval gates, policy enforcement.

Engineering Considerations

Horizontal scalability, observability, testing, resilience.

Future Evolution

Collaborative editing, AI assistance, simulation.

Implementation Notes

Reference standard for all MASS applications.

Summary

Implementation-ready baseline.

Status

Complete
