

MASS HQ ENGINEERING LIBRARY

Volume 001 — Builder's Guide

Document ID: MASS-ENG-001 **Version:** 1.0 **Status:** Approved for Version 1

1. Purpose

The Builder's Guide establishes the engineering standard for every contributor to MASS HQ. It bridges the Enterprise Constitution and implementation. Engineering implements the Constitution; it never rewrites it.

2. Engineering Principles

- Constitution First
- Build foundations once
- Preserve future inventory
- Favor clarity over cleverness
- Deliver implementation-ready guidance
- Keep momentum through small, complete deliverables

3. Standard Build Process

Read the Constitution → Read the applicable Engineering Volume → Implement → Test → Review → Refine → Publish.

4. Engineering Document Standard

Every volume answers five questions: What is this? Why does it exist? How is it built? What does it integrate with? How do we know it is complete? Default engineering content is limited to five pages.

5. Definition of Done

A volume is complete when an experienced engineer—or Claude—can implement the capability without ambiguity, while remaining constitutionally faithful, maintainable, extensible, and appropriate for Version 1.

Engineering Creed

We build with purpose.
We protect the Constitution.
We build foundations once.
We preserve future inventory.
We favor clarity over cleverness.
We measure success by what can be built.

Revision History

Version 1.0 — Initial publication of the MASS HQ Engineering Library.

Engineering transforms the Constitution into reality.
