

MASS-APP-014-V11 — Executive Awareness, Strategy & Organizational Command

Version: 1.0

Status: Production Baseline

Authority: EWO-MASS-APP-014-V11

1. Purpose

V11 transforms governed organizational activity into executive awareness. It assembles health, risk, opportunity, goals, initiatives, dependencies, and meaningful change into concise briefings while preserving leadership authority.

2. Permanent Architecture and Boundary

V11 owns executive awareness views, briefing assembly, organizational pulse snapshots, alert records, initiative observations, decision-readiness assessments, and executive timelines. It does not own departmental facts, analytical calculation, operational execution, financial transactions, relationships, or decisions.

3. Platform Consumption Map

Capability | Consumption

ENG-004/005/007/009/011 | Authorization, events, knowledge, advisory orchestration, audit

ENG-017–023 | Governed departmental intelligence

ENG-024 | KPI, health, risk, opportunity and forecast evidence

ENG-025–027 | Planning, integration and executive information context

APP-014 V02–V10 | Memory, decisions, agents, communications, execution and discovery evidence

Publishes executive-briefing.ready, executive-alert.raised, initiative-observation.recorded, and decision-readiness.assessed. Domain events are consumed without transferring ownership.

4. Role Mapping

V11 role | Baseline mapping | Authority

Executive Observer | Viewer specialization | View authorized awareness and briefings

Initiative Owner | Contributor specialization | Maintain initiative observations and responses

Executive Steward | Steward specialization | Govern briefing definitions and quality

Executive Authority | Administrator specialization | Issue briefings and approve strategic actions

These roles specialize rather than replace APP-014 baseline roles. Executive Authority remains human.

5. Capability Model

Organizational Health and Pulse

Snapshots assemble approved indicators with source, freshness, threshold, trend, and confidence. The pulse identifies material changes, bottlenecks, dependencies, risks, opportunities, and unresolved exceptions for a defined window. ENG-024 supplies calculations; V11 presents them.

Strategic Briefings and Daily Digest

Briefings contain current state, meaningful change, priorities, risks, opportunities, dependencies, decisions required, and citations. A daily digest is a scheduled briefing composition, not communication delivery.

Goals, Initiatives, and Dependencies

V11 references authoritative goals and plans, preserves observations, and shows alignment, progress, and blocking dependencies. It cannot change source plans or claim execution.

Decision Readiness and Scenario Comparison

Readiness measures evidence sufficiency, source freshness, unresolved conflicts, risk coverage, and approval prerequisites. Scenario comparisons display approved options and assumptions; neither capability decides.

Risk, Opportunity, Alerts, and Timeline

Alerts surface material changes and preserve acknowledgement, ownership, resolution, and verification. The timeline records significant briefings, decisions, events, risks, opportunities, and responses with citations.

NOVA and POPS

NOVA executive advisory and POPS historical context are advisory request types executed exclusively through ENG-009. They are not downstream systems and cannot issue approvals.

6. Lifecycle

Awareness: Observed → Validated → Assembled → Presented → Acknowledged → Preserved

Briefing: Draft → Ready → Reviewed → Issued → Superseded → Archived

Alert: Raised → Acknowledged → Assigned → Resolved → Verified → Closed

Issued briefings, acknowledged snapshots, and closed alert evidence are immutable; amendments create new versions.

7. Data Model

Entity | Purpose

ExecutiveWorkspace | Tenant executive context

AwarenessSnapshot | Point-in-time enterprise state

HealthIndicator | Referenced KPI observation

OrganizationalPulse | Material-change summary

StrategicBriefing / BriefingSection | Governed briefing and ordered evidence

ExecutiveAlert | Material risk or opportunity notice
GoalReference / InitiativeObservation | Read-only goal link and progress observation
DecisionReadiness | Evidence sufficiency assessment
DependencyObservation | Organizational dependency state
ExecutiveTimelineEntry | Significant chronological record
AdvisoryRequest | NOVA or POPS request through ENG-009

Tenant-safe composite foreign keys protect relational ownership. Polymorphic domain references require same-tenant authorization and lifecycle validation.

8. API Contracts

Method | Path | Purpose
GET/POST | /executive-awareness/current / /executive-awareness/snapshots | Read or assemble awareness
GET | /executive-pulse | Current organizational pulse
GET/POST | /executive-briefings | Browse or create briefings
POST | /executive-briefings/{id}/issue | Issue immutable briefing
GET | /executive-alerts | Browse alerts
POST | /executive-alerts/{id}/acknowledge | Acknowledge alert
POST | /executive-alerts/{id}/resolve | Record resolution
GET | /initiatives/{id}/awareness | Initiative awareness
POST | /decision-readiness | Assess readiness
GET | /executive-timeline | Executive timeline
POST | /executive-advisory | Request NOVA/POPS advisory

9. Security and Integrity

RLS protects every tenant-owned table. Database triggers protect issued briefings, acknowledged snapshots, and closed evidence. Executive endpoints require explicit role claims. Advisory outputs remain labeled, cited, and non-authoritative. Source permissions are checked whenever detailed evidence is opened.

Implementation-grade definitions are in MASS-APP-014-V11_Migration_Reference.sql.

10. V1 Implementation

V1 delivers configured health snapshots, daily briefing assembly, pulse summaries, goal and initiative references, alerts, timelines, readiness scoring, scenario display, and human-controlled advisory requests.

11. Future Evolution

Adaptive thresholds, richer scenario support, and broader dependency intelligence attach through established source, indicator, and advisory contracts. They do not alter executive authority.

12. Constitutional Boundary Statement

V11 makes the enterprise understandable to authorized leaders. It does not govern departments, calculate domain truth, execute work, authorize expenditure, communicate externally, or replace executive judgment.
