

MASS-APP-014-V14 — Policy Intelligence, Governance Advisory & Compliance Reasoning

Document Control

Field | Value

Document ID | MASS-APP-014-V14

Version | 1.0

Status | Production Baseline v1.0

Authority | EWO-MASS-APP-014-V14

Date | 2026-08-03

1. Purpose

V14 provides evidence-backed interpretation of constitutional rules, engineering standards, application rules, and tenant policies. It identifies applicability, precedence, conflict, gaps, exceptions, and governance risk while preserving the authority of each source publication and every human decision-maker.

2. Permanent Architecture

V14 permanently owns policy indexing, policy-version references, applicability rules, precedence relationships, governed interpretation cases, compliance assessments, conflict findings, exception analyses, governance recommendations, and cited advisory briefs. It never owns or edits the Constitution, Engineering Library, application rules, organizational policies, or enforcement actions.

The architecture separates: source registration; applicability resolution; evidence collection; reasoning; human review; advisory publication; and retirement. Policy content remains in its authoritative repository. V14 stores traceable references and governed interpretation records.

3. Role Mapping

V14 Role | Baseline Mapping | Authority

Governance Viewer | Viewer specialization | View authorized policies, findings, and briefs

Policy Contributor | Contributor specialization | Register source references and request assessments

Governance Steward | Steward specialization | Validate applicability, evidence, and interpretation

Exception Owner | Contributor extension | Prepare exception evidence and remediation proposals

Executive Governance Approver | Administrator specialization | Approve advisory publication and exception disposition

Governance Administrator | Administrator specialization | Configure tenant policy sources and role assignments

Roles specialize rather than replace APP-014 roles. A requester cannot approve their own exception or advisory publication.

4. Platform Consumption Map

Source | Consumed Capability | Delegated Ownership

MASS Constitution | Constitutional rules and precedence | Constitution remains immutable authority

Engineering Library | Standards and subsystem boundaries | Engineering specifications remain authoritative

APP-013 / APP-014 V01–V13 | Application rules, artifacts, evidence, reasoning, learning | Source applications retain ownership

ENG-003/004/005 | Identity, authorization, events | Platform-owned

ENG-007/008 | Knowledge and document references | Platform-owned

ENG-009 | Governed reasoning and NOVA/POPS advisory | Platform-owned

ENG-011/015 | Audit and API contracts | Platform-owned

ENG-022/024/027 | Compliance, analytics, lineage | Capability-owned

Publishes `governance.assessment.completed`, `governance.conflict.detected`, `governance.exception.reviewed`, `governance.recommendation.ready`, and `governance.briefing.issued`.

5. Gateway Inventory

Gateway | Contract | Failure Behavior

ConstitutionGateway | Read-only constitutional publications | Block definitive assessment if required authority unavailable

EngineeringLibraryGateway | Read-only engineering standards | Mark assessment partial and identify missing source

ApplicationRuleGateway | APP-013/014 rule references | Preserve stale reference with freshness warning

OrganizationalPolicyGateway | Tenant policy documents | Reject unversioned or unauthorized policy sources

KnowledgeGateway | ENG-007 retrieval | Continue with explicit missing-knowledge state

DocumentGateway | ENG-008 document references | Preserve retry-safe persistence request

AIOrchestrationGateway | ENG-009 governed reasoning | Return evidence packet without synthesis

ComplianceGateway | ENG-022 compliance state | Record unavailable control evidence

AnalyticsGateway | ENG-024 indicators | Mark indicator incomplete

LineageGateway | ENG-027 source lineage | Prevent issuance where mandatory lineage fails

EventGateway / AuditGateway | ENG-005 / ENG-011 | Outbox and local audit retry

6. Policy Model

Policy sources are classified as constitutional, engineering, application, organizational, regulatory-reference, or operational. Each registration records source identity, version, owner, jurisdiction, effective and retirement dates, authority rank, tenant scope, and immutable checksum.

Applicability combines subject, action, jurisdiction, tenant, effective time, and policy scope. Precedence is explicit and evidence-backed; V14 never invents precedence. Conflicts remain unresolved findings until an authorized human records disposition.

7. Governance Reasoning Lifecycle

Requested → Authorized → Sources Resolved → Applicability Evaluated → Conflicts Identified → Evidence Assembled → Advisory Drafted → Human Reviewed → Issued → Retired

Assessments distinguish compliant, deviation, conflict, `insufficient_evidence`, and `not_applicable`. A finding describes observed inconsistency; it is not enforcement.

8. Exceptions and Recommendations

Exception analysis records requested deviation, governing sources, business justification, risk, duration, compensating controls, affected scope, and required approver. Approved exceptions are immutable, time-bounded, and do not modify policy.

Recommendations include cited evidence, impact, urgency, confidence, alternatives, and required authority. Missing-policy detection proposes a governance gap for human consideration without drafting or adopting policy autonomously.

9. Data Model

Entity | Purpose | Immutable State

PolicySource | Registered authoritative source | After activation

PolicyVersionReference | Version and checksum | Always after validation

PolicyApplicabilityRule | Governed applicability criteria | After activation

PolicyPrecedence | Explicit precedence relationship | After approval

GovernanceAssessment | Interpretation case | After issuance

AssessmentEvidence | Cited source evidence | After validation

ComplianceFinding | Deviation or consistency finding | After review

PolicyConflict | Contradictory authorities | After disposition

ExceptionRequest | Requested governed deviation | After decision

ExceptionDecision | Human disposition | Always

GovernanceRecommendation | Advisory improvement | After decision

GovernanceBriefing | Executive advisory brief | After issuance

GovernanceAdvisoryRequest | NOVA/POPS request via ENG-009 | After completion

GovernanceOutbox | Reliable events | After publication

10. API Contracts

Method | Path | Purpose | Role

GET/POST | /governance/policy-sources | Browse/register sources | Viewer/Contributor

GET | /governance/policies/{id}/versions | Read policy versions | Governance Viewer

POST | /governance/assessments | Request assessment | Policy Contributor

GET | /governance/assessments/{id} | Read assessment and citations | Governance Viewer

POST | /governance/assessments/{id}/issue | Issue assessment | Governance Steward

GET | /governance/findings | Browse findings | Governance Viewer

POST | /governance/conflicts/{id}/disposition | Record conflict disposition | Executive Governance Approver

POST | /governance/exceptions | Request exception | Exception Owner

POST | /governance/exceptions/{id}/decide | Decide exception | Executive Governance Approver

POST | /governance/recommendations | Prepare recommendation | Governance Steward

POST | /governance/briefings/{id}/issue | Issue briefing | Executive Governance Approver

POST | /governance/advisory-requests | Request NOVA/POPS advisory | Governance Steward

Mutating requests are idempotent. Approval endpoints enforce separation of duties.

11. Security and Integrity

Tenant identity derives from `auth.jwt()`. Composite foreign keys prevent cross-tenant relationships. Validated source versions, issued assessments, reviewed findings, conflict dispositions, exception decisions, decided recommendations, issued briefings, and completed advisory responses are database-immutable. Source authorization is checked both when cited and when opened.

Implementation-grade schema is defined in `MASS-APP-014-V14_Migration_Reference.sql`.

12. V1 Implementation

V1 implements source and version registration, applicability and precedence lookup, governed assessment cases, conflict and gap findings, exception review, recommendations, compliance summaries, cited briefings, and ENG-009 advisory requests. Reasoning uses transparent rules plus governed AI synthesis.

13. Future Evolution

Future regulatory adapters, richer policy graphs, predictive impact assessment, and expanded cross-jurisdiction analysis attach through existing gateway, source, evidence, and review contracts. They cannot weaken human authority or source immutability.

14. Constitutional Boundary Statement

V14 interprets and advises. It does not amend constitutional rules, alter standards or policy, approve governance change, execute compliance action, discipline people, or override executive authority.
